Legacy Rentals
The bridge between luxury and affordability

10 / 12 / 18

Introduction:

A platform for car rentals that spans the global market.

Purpose:

This project is valuable for those seeking luxury and affordable car rentals worldwide. Whether it be for business or travel, Legacy Rentals provides an innovative and easily accessible platform for all car rental needs.

Platform:

The service will use a database on the internet, so the only requirements are an internet connection and a minimal amount of memory for the GUI. It will run on a variety of computers with different specifications with minimal difference besides the speed of displaying pages.

Audience:

The Legacy Rentals platform will be used by those seeking luxury and affordable car rentals worldwide. Car rentals are available to all those with a government issued driver's license. Insurance is included in the rental price.

Team Dynamic:

Company meetings will be scheduled in the team chat. Most meetings will occur on Wednesday morning. Jarret will be in charge of the code. Configuration will be determined on a week by week basis.

Detailed Description:

The user interface will provide an easy to use web based service. The service will process transactions such as renting cars, keeping an up to date background log of all available and in service cars, and search queries. Rental log data will be stored in a database along with a log of all users rental history with the company. Each car will also be stored in a database to ensure each car shows the appropriate rental information on the web service such as available, unavailable and in service.
